

THE SILVER COLLOID STERILISER....DOMESTIC, MEDICAL & COMMERCIAL USE

The **Omega** water treatment system will supply you with the **safest** water out of all water treatment systems on the market. The unique sterilising process extends the life of the cartridges, which saves you money on annual servicing. **The Omega Domestic System** will provide your home or office, **Bio-Film Free** water lines/filters and enhance the water used with a colloidal silver residual, as well as bringing back a natural taste to the water used, by removing the chemicals but ensuring the natural minerals remain.

SILVER COLLOID:
The natural way
to destroy bacteria!

WATER LINE & FILTER HEALTH WARNING

It has long been a problem with no solution. Biofilm is a film that develops on the inside wall of all water pipes and in all water filter systems. This "barrier" provides protection for bacteria and supplies the protein for bacteria to continue to multiply.

The outer surface of this gel like barrier will eventually be dislodged allowing the bacteria to release. At this point the bacteria can be around 1000-times resistant to the low level of chlorine. This biofilm/bacteria is the cause for 65% of all illnesses.

You can see evidence of this Biofilm by lifting the lid on your toilet cistern.

We Broke The Barrier!

The Omega system has been proven, in the laboratory and with on site testing, our systems can-

- Remove the biofilm.
- Kill all harmful bacteria.
- Have no bacteria re-growth.
- Provide before & after disinfection.

TECHNICAL-THE SILVER STORY ENDS WITH OMEGA

Silver has been used for centuries as a bacteria control devise. However with water sources varying, a positive result can not be guaranteed. The Omega System incorporates a controlled electronically released silver colloid resulting in a positive kill of all harmful bacteria.

Town Water - Bacteria contamination in town water is common despite chlorination. Burst water main and back flow problems are just a couple of things that no water authority can control. By far the worst problem is the Biofilm. The other main concern is a by-product of chlorination called THM's- Trihalomethanes - this has been positively linked to stomach, bowel and rectal cancer. The Omega System will remove chemicals, destroy the bacteria and maintain a bacteria free system.

Tank, Creek, Bore and Spring Water - Bacteria contamination is by far more serious here with the known presents of birds and animal waste, and the possible contamination of herbicides and pesticides.

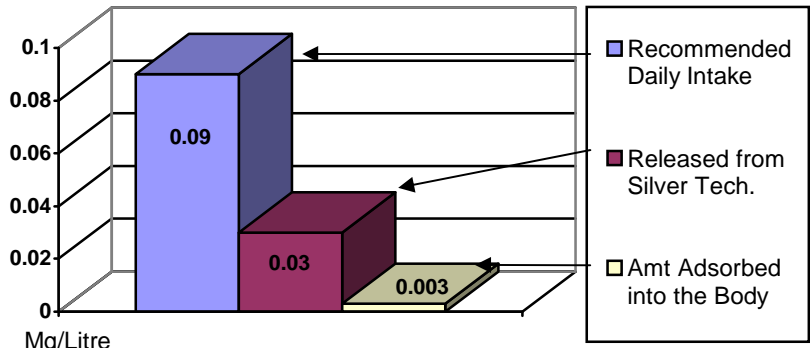

Independent tests have been carried out where the most harmful strain of E.coli bacteria was added to water at a level of more than 10,000 times higher than that found in a septic tank. The result was a 100% kill with no bacteria regrowth. (These tests are available upon request.)

Recommended Intake of Silver: 0.09mg/Litre
Silver Produced: 0.03mg/Litre

Your Omega Water System will produce silver colloid at 0.03mg/litre - 1/3 of your recommended daily intake. Of the silver colloid you consume, your stomach lining will only absorb around 10% of the 0.03 mg/l, so the level of intake by drinking this water is *very, very* low. Therefore to reach your recommended daily level by drinking water from the silver system, you will need to drink 30 litres per day! (See graph below.) Medical authorities advise that 2 litres of water per day is all that is required. Receive the balance of your water and silver intake through organically grown fruit and vegetables.

Running Cost

Sanitiser:	\$80.00
-Approx. 300,000 litres; OR Approx. every 5 years.	
Carbon Cartridge (first housing)	\$ 26.00
10 micron- capacity 30,000 litres or 12 months	
Ceramic Cartridge (second housing)	\$45.00
0.4 micron cleanable Capacity 60,000 litres/ 3-5 years aver.	
Power Requirements:	
Battery Powered (4 x AA Batteries) 200 working hours / over 6 months	
Summary-	Aver. Yearly running cost is \$55.00 per year (Based on 5years) Excludes labour
